FORM NOTES FOR FORM 11

The apparent change in the data is due to the different source for the data. Year 2003 was exceptional as there was a major project and a different reporting system for those children receiving sealants. The data source was within the Department of Education. Last year's data was based only on Public Health Dental data.

To reduce the number of youths who smoke cigarettes

DEFINITION

Numerator:

Number of youth surveyed who report smoking 2 or more cigarettes per day on the days they smoked.

Denominator:

All youth answering the Youth Risk Behavior Survey question

Units: 100 **Text:** percent

HEALTHY PEOPLE 2010 OBJECTIVE

DATA SOURCES AND DATA ISSUES

Youth Risk Behavior Survey which is undertaken in the state's public schools

SIGNIFICANCE

One out of three young people who become regular smokers will die of a smoking-related diseases. If an individual refrains from smoking during his youth, he is more likely to never start. Smoking is one factor that relates to low-birth weight births and thus infant mortality. According to the Healthy People 2000 Review 1997, cigarette smoking accounts for 17% to 26% low birth weight babies.

SP # 2

PERFORMANCE MEASURE:

The percent of youth reporting any use of alcohol in the last 30 days.

STATUS:

Active

GOAL

To decrease the numbers of youth who use alcohol

DEFINITION

Numerator:

Number of youth surveyed who report using alcohol in the last 30 days

Denominator:

All youth answering the Youth Risk Behavior Survey question

Units: 100 **Text:** percent

HEALTHY PEOPLE 2010 OBJECTIVE

DATA SOURCES AND DATA ISSUES

Youth Risk Behavior Survey which is undertaken in the state's public schools

SIGNIFICANCE

The reduction of alcohol use for all is a strategy to reduce AIDS, motor vehicle injuries, unintended pregnancy, and poor pregnancy outcome.

SP # 3

PERFORMANCE MEASURE:

Percent of youth during the last 12 months who feel so sad or hopeless almost every day for two weeks or more in a row that they stopped doing usual activities

STATUS:

Active

GOAL

To decrease the numbers of adolescents who are so depressed that they cannot carry on usual activities

DEFINITION

Numerator:

Number of youth surveyed who report that during the prior 12 months feeling so sad or hopeless almost every day for two weeks or more in a row that they stopped doing usual activities

Denominator:

All youth answering the Youth Risk Behavior Survey question

Units: 100 **Text:** percent

HEALTHY PEOPLE 2010 OBJECTIVE

DATA SOURCES AND DATA ISSUES

Data comes from the Youth Risk Behavior Survey undertaken in the state's public schools. Limitations of the data are that its only undertaken in some of the public schools, private schools are not included, and it is takes place every 2 years rather than yearly.

SIGNIFICANCE

The most recent Title V Needs Assessment identifies Adolescent mental health problems as of great concern. Number of service providers are limited and early detection and prevention opportunities are also limited. This measure is meant to provide a method of tracking depression which leads to suicide and other risk taking behaviors.

SP # <u>4</u>	
PERFORMANCE MEASURE:	Percent of Medicaid eligible children under 3 years who received an initial blood lead screen
STATUS:	Active
GOAL	To ensure that all Medicaid eligible children are screened for high lead levels
DEFINITION	<p>Numerator: Medicaid eligible children under three who have received at least one blood lead screen</p> <p>Denominator: Total of all Medicaid eligible children under the age of three</p> <p>Units: 100 Text: percent</p>
HEALTHY PEOPLE 2010 OBJECTIVE	
DATA SOURCES AND DATA ISSUES	Medicaid data and Blood Lead Registry
SIGNIFICANCE	Poor, undernourished, or homeless children run a greatly increased risk of poisoning from even small doses of lead. Medicaid eligible children represent our most vulnerable population.

SP # 5

PERFORMANCE MEASURE:

Percent of women delivering live-born infants reporting any cigarette smoking during pregnancy

STATUS:

Active

GOAL

To prevent a known risk factor for infant mortality and to reduce respiratory problems for children exposed to second-hand smoke.

DEFINITION

Numerator:

Numerator: Number of women giving birth to live-born infants who report smoking in a calendar year.

Denominator:

Denominator: Total number of women delivering live-born infants in a calendar year

Units: 100 **Text:** percent

HEALTHY PEOPLE 2010 OBJECTIVE

DATA SOURCES AND DATA ISSUES

The data source is Birth Certificate data provided through vital statistics. It is based on what is reported.

SIGNIFICANCE

Infant mortality is highest for smokers. According to the Health People 2000 Review 1997, cigarette smoking accounts for 17 to 26% low birth weight babies. If the mother remains smoking, there are also increased chances for a SIDS death and respiratory problems for their children.

SP # 6

PERFORMANCE MEASURE:

The percentage of births to black women in Delaware who have received adequate prenatal care.

STATUS:

Active

GOAL

To bring black women from throughout Delaware into early prenatal care and ensure that they receive ongoing prenatal care.

DEFINITION

Adequacy of Prenatal Care is based on the Adequacy of Prenatal Care Utilization Index by Milton Kotelchuck, PhD, MPH

Numerator:

Number of births to black women who have received adequate prenatal care

Denominator:

Total number of births to black women in the state.

Units: 100 **Text:** percent

HEALTHY PEOPLE 2010 OBJECTIVE

DATA SOURCES AND DATA ISSUES

Vital Statistics

SIGNIFICANCE

The most recent statistics from Delaware shows a low rate of adequate prenatal care for black women as compared to other women in the state. Addressing this goal will help the state to meet its goal of eliminating health disparities and providing interventions that will decrease the rate of extremely low birth weight births to black women.

SP # 7

PERFORMANCE MEASURE:

Percent of live births to women who have another birth in less than 18 months

STATUS:

Active

GOAL

To prevent a known risk factor for infant mortality.

DEFINITION

Numerator:

Number of live births within 18 months after giving birth to another child, exclusive of multiple births

Denominator:

Total number of live births to women having another child

Units: 100 **Text:** percent

HEALTHY PEOPLE 2010 OBJECTIVE

DATA SOURCES AND DATA ISSUES

The source is vital statistics data from the calendar year. Infants born within 4 months after the birth of a sibling were excluded since these were probably multiple births.

SIGNIFICANCE

A study completed by the state's Perinatal Board Scientific Committee determined that if the short interval births are reduced by 50%, 33 infant deaths would be prevented over a five-year period. Originally, a 24-month interval was targeted. However, in December 2000, the Scientific Committee reviewed current data and supporting information and recommended that the state use 18-month intervals between births as a performance measure. This decision collaborates the findings of the Centers for Disease Control and Prevention, which concluded that the wait between birth pregnancy is best between 18 to 23 months.

SP # 8

PERFORMANCE MEASURE:

The percent of extremely low birth weight black infants among all live births to black women

STATUS:

Active

GOAL

To reduce one of the factors that is a cause of infant mortality and morbidity in a population that has high rates.

DEFINITION

Numerator:

The number of all live black births with birth weight less than 1000 grams born in the previous five years

Denominator:

The total number of live black infants born in the previous five years

Units: 100 **Text:** percent

HEALTHY PEOPLE 2010 OBJECTIVE

DATA SOURCES AND DATA ISSUES

Vital Statistics

SIGNIFICANCE

Low birth weight is a known cause of infant mortality and morbidity. The number of extremely low birth weight black births is the leading cause of the disparity between white and black infant deaths in Delaware.

SP # 9

PERFORMANCE MEASURE:

The rate of children under age 1 who die as a result of Sudden Infant Death Syndrome

STATUS:

Active

GOAL

To reduce one of the chief causes of infant mortality in the state

DEFINITION

Numerator:
Number of live infants who die as a result of Sudden Infant Death Syndrome during the previous five years.
Denominator:
Total number of live infants born in the State and with state addresses during the previous five years
Units: 100000 **Text:** rate

HEALTHY PEOPLE 2010 OBJECTIVE

DATA SOURCES AND DATA ISSUES

Vital Statistics

SIGNIFICANCE

Current Delaware shows that if 75% of infants were placed on their backs during the years 1990-1994, 28 infants could have been saved.

SP # 10

PERFORMANCE MEASURE:

Hospital discharge rate for children from five through 17 years with asthma

STATUS:

Active

GOAL

To ensure quality health care for children with asthma so that they do not need to be hospitalized

DEFINITION

Numerator:

Number of hospital discharges for asthma diagnosed children from 5 through 17 years

Denominator:

Total number of children 5 through 17 years

Units: 10000 **Text:** rate

HEALTHY PEOPLE 2010 OBJECTIVE

DATA SOURCES AND DATA ISSUES

Hospital discharge data This data cannot tell us numbers of actual children, how long they were hospitalized or actual service rendered.

SIGNIFICANCE

According to "Delaware 2000," asthma affects about 28,000 Delawareans based on national prevalence rates. Hospital discharge rates have been increasing rapidly in the child population. If these patients get proper care and are not exposed to hazards such as smoke, they would not need to be hospitalized. Care for this group can also be looked at as indicative of care for children with special health care needs as a whole.

STATE: DE

SP # 1

PERFORMANCE MEASURE:

Percent of women delivering live-born infants reporting any cigarette smoking during pregnancy

GOAL

To prevent a known risk factor for infant mortality and to reduce respiratory problems for children exposed to second-hand smoke.

DEFINITION

Numerator:

Numerator: Number of women giving birth to live-born infants who report smoking in a calendar year.

Denominator:

Denominator: Total number of women delivering live-born infants in a calendar year

Units: 100 **Text:** percent

HEALTHY PEOPLE 2010 OBJECTIVE

DATA SOURCES AND DATA ISSUES

The data source is Birth Certificate data provided through vital statistics. It is based on what is reported.

SIGNIFICANCE

Infant mortality is highest for smokers. According to the Health People 2000 Review 1997, cigarette smoking accounts for 17 to 26% low birth weight babies. If the mother remains smoking, there are also increased chances for a SIDS death and respiratory problems for their children.

OBJECTIVE

2006	2007	2008	2009	2010
------	------	------	------	------

SP # 2

PERFORMANCE MEASURE:

Percent of live births to women who have another birth in less than 18 months

GOAL

To prevent a known risk factor for infant mortality.

DEFINITION

Numerator:

Number of live births within 18 months after giving birth to another child, exclusive of multiple births

Denominator:

Total number of live births to women having another child

Units: 100 **Text:** percent

HEALTHY PEOPLE 2010 OBJECTIVE

DATA SOURCES AND DATA ISSUES

The source is vital statistics data from the calendar year. Infants born within 4 months after the birth of a sibling were excluded since these were probably multiple births.

SIGNIFICANCE

A study completed by the state's Perinatal Board Scientific Committee determined that if the short interval births are reduced by 50%, 33 infant deaths would be prevented over a five-year period. Originally, a 24-month interval was targeted. However, in December 2000, the Scientific Committee reviewed current data and supporting information and recommended that the state use 18-month intervals between births as a performance measure. This decision collaborates the findings of the Centers for Disease Control and Prevention, which concluded that the wait between birth pregnancy is best between 18 to 23 months.

OBJECTIVE

2006	2007	2008	2009	2010
------	------	------	------	------

SP # 3

PERFORMANCE MEASURE:

The percent of extremely low birth weight black infants among all live births to black women

DEFINITION

Numerator:

The number of all live black births with birth weight less than 1000 grams born in the previous five years

Denominator:

The total number of live black infants born in the previous five years

Units: 100 **Text:** percent

HEALTHY PEOPLE 2010 OBJECTIVE

DATA SOURCES AND DATA ISSUES

HEALTHY PEOPLE 2010 OBJECTIVE

DATA SOURCES AND DATA ISSUES

Data comes from the Youth Risk Behavior Survey undertaken in the state's public schools. Limitations of the data are that its only undertaken in some of the public schools, private schools are not included, and it is takes place every 2 years rather than yearly.

SIGNIFICANCE

Number of service providers are limited and early detection and prevention opportunities are also limited. This measure is meant to provide a method of tracking depression which leads to suicide and other risk taking behaviors.

OBJECTIVE

DATA SOURCES AND DATA ISSUES

Hospital discharge data This data cannot tell us numbers of actual children, how long they were hospitalized or actual service rendered.

SIGNIFICANCE

According to "Delaware 2000," asthma affects about 28,000 Delawareans based on national prevalence rates. Hospital discharge rates have been increasing rapidly in the child population. If these patients get proper care and are not exposed to hazards such as smoke, they would not need to be hospitalized. Care for this group can also be looked at as indicative of care for children with special health care needs as a whole.

Only 53.8 % of the doctors have talked about the changing needs as the child becomes an adult. 60.9% of the children have a plan for addressing the changing needs. 49.9% of the doctors had discussed the shift to an adult provider. And a disappointing 19.7% of the children had received guidance and support in the transition to adulthood. There are over 500 young adults with special needs turning 18 that are discharged from the A.I. duPont Hospital for Children annually.
